

APPLICATION PROGRAMMING INTERFACE

BENEFITS:

- ➔ View scanned documents from any EHR
- ➔ Integrate with your HR system to deliver employee reviews
- ➔ View clinical documents in your web-based physician portal

➔ EXPAND YOUR EXISTING PLATFORM

You need access to enterprise content without cumbersome manual steps; however, many applications do not have the ability to store images, nor to import them from foreign platforms.

Ras integrates into all of your existing platforms, allowing users to view insurance cards, driver's licenses, and other documents at the click of a button – without ever leaving the screens they are viewing.

➔ THE RESULT?

A simplified workflow.

Just click a button and see all of the images for the patient.

Improved user experience.

It feels like images are stored directly in the user's primary application.

➔ INTEROPERABILITY

The Ras API will work with Siemens, Meditech, McKesson, Cerner, EPIC, NextGen and Keane. If your system is not listed below, ask us - chances are, Ras will work with yours as well.

The fact is that the Ras API integrates with ANY and ALL commercial applications as well as home-grown applications and websites.
