

## A NO NONSENSE APPROACH TO CAPTURING AND ORGANIZING **PATIENT INFORMATION**

### SECURE ELECTRONIC PATIENT FOLDERS

Rasi, the imaging and scanning module for dbtech's Ras platform, scans and manages electronic and hardcopy patient accounting and clinical reports and documents from disparate systems and stores that information in an electronic patient folder for easy retrieval and distribution. It automatically integrates indexes and links electronic reports, forms, EDI and scanned documents, providing a complete patient-centric view of patient accounting and medical records documents without the need for manual indexing of information.

### WHAT WILL **Rasi** DO FOR YOU?

Rasi is an enterprise document management solution with added intelligence designed specifically for hospitals. It eliminates paper-handling costs, reduces document search and retrieval times and reduces outstanding accounts receivable days, eliminates paper delays, non-payments and write-offs, and eliminates paper altogether. Rasi is an elegant user-friendly solution that quickly and cost-effectively leverages current technology investment and helps to automatically capture, organize and distribute data throughout the enterprise.

All patient documentation including driver's licenses, insurance cards, advanced directives, referrals, face sheets, eligibility reports, bills, EOBs, medical records and bar coded documents are secure and available in a central environment with controlled access by user, department or document type.

Rasi provides users with immediate and simultaneous access to patient folders, improves clinical documentation to support appropriate billing service levels and assists in improving patient, provider and employee satisfaction while meeting HIPAA and Joint Commission requirements. With Rasi Web, physicians and other authorized users can access patient financial and clinical documents and information remotely and securely from a Web browser. With Rasi PDF/OCR, scanned documents such as advanced directives, EOBs, insurance correspondence, clinical notes, contracts and resumes are converted into searchable PDF files that can be organized into patient, vendor or employee folders. With Ras SmartLinks costs associated with expanding Rasi to all hospital departments are eliminated. Links may be set up between Rasi patient folders and Ras documents quickly and easily.

“

*I have never seen my staff so enthusiastic about a new system as they are with Rasi.*

*The time and money this will save us in the long run will be substantial.*

*Stacey from dbtech was wonderful and the staff really liked her.*

*This brings our Patient Accounts/Patient Access Departments into the 21st century.*

”

- Director of Patient Financial Services  
Englewood Hospital & Medical Center  
Englewood, NJ

## DOCUMENT MANAGEMENT AND IMPLEMENTATION AT A FRACTION OF THE COST

Rasi has a proven track record of savings relating to reduction or elimination of paper, labor, storage, document distribution, operational and managerial expenses all at a fraction of the cost of comparable enterprise document management imaging systems. Rasi is easy to deploy and is a scalable application for easy, quick and cost-effective implementation throughout a single or multi-facility healthcare environment. There is no installation on users' desktops and no requirement for a database administrator to handle on-going maintenance.

## WHAT MAKES RASI UNIQUE IN ENTERPRISE INFORMATION MANAGEMENT?

Unlike other enterprise document management systems, Rasi works with existing operational processes without requiring modification of existing workflows and can be easily installed and implemented in all organizations. All patient financial and clinical documents can be placed in the electronic patient folder.

**dbtech db = HEALTHCARE EXPERIENCE  
+ SOFTWARE EXPERTISE  
+ HUNDREDS OF SUCCESSFUL IMPLEMENTATIONS**

Headquartered in Clark, N.J., dbtech is a leading provider of automated information management and report distribution tools. With over twenty-five years of healthcare and software expertise, dbtech offers a suite of products designed to provide easy and fast access to business critical information. Backed by a team of industry veterans who understand the challenges facing the healthcare industry, dbtech has developed a straightforward, cost-effective, painless approach to data management. Its flagship product, Report Automation System (Ras), is a platform of software tools enabling hospitals to easily optimize and manage the paper cycle. Dbtech has assisted hundreds of healthcare facilities in increasing productivity and reducing costs associated with the myriad of paper-oriented revenue cycle processes.
